

MULTIFUNCTIONAL SURGICAL INSTRUMENT

Abstract of the Invention

[0036] Disclosed is a minimally invasive surgical instrument that may be used in hand-assisted laparoscopic surgeries. The device is multifunctional surgical instrument that may be mounted directly on a surgeon's fingertip and inserted through an incision to allow the surgeon to manipulate tissue during a surgical procedure. The surgical instrument may be used for blunt dissection and allows for finger actuation of two opposing jaws to enable the surgeon to grasp and dissect tissue.
